SUBJECT: REQUEST FOR SYSTEM IMPLEMENTATION AND DEPLOYMENT

Dear Dr. Temanel:

Greetings of peace and goodwill. We, fourth-year Bachelor of Science in Computer Science (BSCS) – Data Mining Track students under the College of Computing Studies, Information and Communication Technology (CCSICT), respectfully request permission from your good office to deploy and implement our defended undergraduate thesis system entitled **"A Centralized AI-Powered Thesis Library Using Retrieval-Augmented Generation" (IskAI)** at the College of Computing Studies, Information and Communication Technology, Isabela State University – Echague Campus.

IskAI is a closed-domain web-based thesis archive and retrieval platform built to support CCSICT students, faculty advisers, and archive administrators. Using Retrieval-Augmented Generation (RAG), the system answers research inquiries with citation-backed syntheses grounded strictly in approved CCSICT manuscripts, provides semantic archive search with APA 7th Edition and BibTeX citation tools, and screens proposed thesis capsules and manuscripts for topic duplication prior to title defense.

To protect author copyright and comply with Republic Act No. 10173 (Data Privacy Act of 2012), the platform enforces an indirect access model in which full-text PDF manuscripts remain in restricted institutional storage while search and chat responses expose verified bibliographic metadata and citations only. Upon your approval, we will coordinate with the college administration to configure role-based accounts, conduct a system orientation for designated personnel, and turn over complete operational documentation.

Thank you very much for your time, guidance, and favorable consideration of this request.

Respectfully yours,

AHRON JOHN F. BARLIS
BSCS Student Researcher

CARLO ROSSI P. GALLARDO
BSCS Student Researcher

Noted by:

JENEFER P. BERMUSA, MIT
Thesis Adviser, CCSICT

Recommending Approval:

DR. ALBERT A. VINLUAN
Program Chair, BSCS, CCSICT
